

The Most Compact and Economical High-Performance, High-Efficiency Centrifugal Compressors

- Compact footprint and mobile design allows placement next to existing PD blower, simply re-route electrical and pneumatic line
- Mobile cart is designed specifically for pneumatic conveying demonstrations over a wide range of applications
- Demonstration cart can be easily configured to support a broad range of pressure (4 - 22 psi) and flow (400 - 2200 cfm)
- Contains the same technology as our complete blower system to demonstrate actual electrical consumption for your industrial application, typically 10 -35% savings over a PD blower
- Discharge temperatures typically 20 - 50° lower than comparable PD blowers
- Quiet Operation

Inovair is the leading supplier of compressors for military and commercial aircraft deicing

Innovative New Technology Reduces Energy Consumption, Line Discharge Temperatures, & Noise

Offering the lowest cost per cfm, Inovair covers a wide range of airflow demands in pneumatic conveying applications with this innovative product. Thanks to its advanced, high-efficiency centrifugal compressor technology, the Inovair Complete Blower System can provide energy savings of 10 to 35% relative to positive displacement blowers.

All Inovair products are designed, manufactured and serviced in Kansas City and is available now. Call today for more information.

Still having doubts after reading our claims?

Allow us to bring our demonstration cart to your facility for a field demonstration to give you absolute confidence in what we can deliver. Call now to schedule a demonstration on your most challenging application.
